1

INSTALLATION

Make a pair of pigtails by cutting a Perimaguard™ Asset Protection cable in half and stripping back the jacketing to easily access the 2 conductors.

2

Terminate the cables directly to the security panel or a zone expansion model (as pictured here).

- Tip:
- Customer must be able to bypass zone for cable. Zoning for cable must be bypassed before the customer can disconnect the cable.

3

Bring your cables outdoors through a NEMA 3R rated junction box.

- Tips:
- Make sure all splices are done and kept indoors.
 - Mount the junction box at least 3 feet from the ground.
 - Warning signs should be placed in plain sight of customers and employees. Suggested text: "Cables are connected to alarm circuits, please do not disconnect."

4

INSTALLATION

Start building your loop by connecting additional Perimaguard Asset Protection cables. Need to cover a ton of space? We've gotcha covered - you can expand your Perimaguard loop up to 3,000 feet.

Tip: ■ Customers should be shown how to thread cables through assets, they should not be too tight such that accidental movement of assets will disconnect the loop.

OPERATING THE SYSTEM

AFTER HOURS:

With the Perimaguard Asset Protection cables run through your customers' outdoor assets, make sure the system is armed and the zone assigned to the Perimaguard cables is not bypassed. Any cut or disconnection of the cables will trigger the alarm.

DURING STORE HOURS:

Some customers may prefer to have the system armed throughout the day to protect against daytime theft, but still require an easy way for a team member to temporarily disconnect the cable to assist in a sale.

In these cases we recommend installing an add on receiver and a remote transmitter to temporarily bypass the zone(s) associated with the Perimaguard Asset Protection cables.

*Paige is proud to offer zone expansion modules and wireless transmitters to help you round out the Perimaguard™ Asset Protection cable solution. Prefer to use a different brand's zone expander or transmitter? Go right ahead - and give us a call if you have any questions!
